

# Kwik-Set™ Curved Product Stop

## Features and Benefits

- ◆ Kwik-Set is the most versatile system on the market.
- ◆ Track lenses or divider lenses available.
- ◆ Available in 2" or 3"H lenses.
- ◆ Minimum 1.75" width with standard product.
- ◆ Ideal for beverages or other cylindrical packaging.

## Optimize beverage displays with Kwik-Set Curved Product Stops

The Kwik-Set™ Curved Product Stop provides unmatched versatility and performance for single-serve beverage merchandising. Unlike fixed-width systems on the market today, Kwik-Set adjusts to the width of the beverage can or bottle to maximize shelf space and pack-out. This provides the optimum use of shelf space, and increases performance of pushing each and every product to the front of the shelf.

Curved Product Stops are available as divider product stops or track product stops depending on the specific use case. Heights of 2" and 3" are also available to accommodate the heights of the products being merchandised. Additionally, a back track can be used to keep dividers in place and prevent splaying of the dividers when fully loaded with products.

## Specifications

Item No.	Description	Dimensions	Pack
